DUDLEY ROAD EAST - OLDBURY – WEST MIDLANDS – B69 3EB

Marwel Slat Conveyors are most suitable for use in applications where the unit loads are beyond the capacity of belt conveyors and other forms of conveyor.

Slat Conveyors are also useful where heat and adverse conditions render the use of belt conveyors impracticable.

The use of Slat Conveyors is advantageous if sideways loading or discharge of heavy articles is to be effected by pusher units or ploughs. Individual slats can be fitted with ancillary ball bearing rollers where the loadings are extreme.

Marwel Slat Conveyors are frequently fitted with chains having oversize rollers and side guide bars along the tracks. This ensures accurate tracking without sideways drift. The larger roller diameters reduce the numbers of revolutions per roller at a given chain speed and this increases chain life. This is a particular benefit in foundries where the chains are often run dry.

Marwel Slat Conveyors are ideal for in floor assembly line conveyors
