DUDLEY ROAD EAST - OLDBURY – WEST MIDLANDS – B69 3EB

Marwel Conveyors design and manufacture a range of Vacu-lift stations specifically designed for pallet inspection. Within this range is a system designed to be economical and transportable. Ideal for sites where there is only a short term requirement for pallet inspection. The system uses a vacuum lift tube which is powered from an electric motor driving a blower – so there is no immediate requirement for an air compressor.

The two units shown in our workshops and on site indicate their overall size. They are designed to be loaded and unloaded from a low loading transporter using two fork lift trucks. Access is provided on four sides for fork insertion. They are transported to site as a fully assembled unit “ready to go”. The only requirement is to assemble the conveyors provided and connect a 3 phase electrical supply.
